

Social Determinants of Health Platform for Managed Care Organizations and other HCBS Providers

The Social Determinants of Health (SDoH) platform provides a complete solution for identifying vulnerable members, connecting with Community Based Organizations, and improving health outcomes.

HOW THE SOCIAL DETERMINANTS OF HEALTH PLATFORM CAN IMPROVE CARE TO YOUR MEMBERS

Social Determinants of Health (SDoH) such as the stability of where people live, the availability of food, the availability of transportation, financial security, and the availability of healthcare can have a drastic impact on their decision making and health outcomes. By identifying these needs and tailoring interventions to improve them, members will receive better outcomes at a lower overall cost on medical claims for the health plan.

THE QCSS SDOH PLATFORM ADDRESSES THIS NEED BY PROVIDING:

Robust way to collect Social Determinants of Health (SDoH) Data. An easy to use and customizable solution to complete assessments and measure the SDoH impact across your population

Understanding Your Vulnerable Members. Easily see the members at-risk associated with each Social Determinant of Health (SDoH) and visualize broader domains so that you can tailor effective interventions to your specific population

Connecting with Community Based Organizations to expand impact. Our closed-loop referral platform lets you refer patients to Community Based Organizations, verify that services were provided, and receive ongoing feedback on the referral status

Delivering Cost Effective Health Outcomes. Review detailed analytics on effectiveness and cost savings as a result of strategic Social Determinant of Health (SDoH) interventions. This includes monitoring reduction in hospital admissions and emergency care visits

ABOUT QCSS

Our mission is to integrate domain expertise with technology solutions to help make Managed Long Term Services and Supports successful. We seek to enable health plans and providers to improve health outcomes for their vulnerable populations and to thrive in a value-based healthcare system.
